

STARRY NIGHTS

DANIEL M SOREF
PLANETARIUM

February 2019

HOW TO USE THIS MAP

MPM's sky map shows the night sky as it appears on various dates and times. The sky lies overhead so we've designed the map to be held above your head. Compass directions are indicated along the edge of the circle. Turn the sky map around its center so the compass direction that appears along the bottom of the map is the same as the direction that you face. Begin by using the sky map to find a bright star pattern in the sky.

BEST VIEWS

This chart should be used within an hour of the times listed: February 1 at 9 p.m., February 15 at 8 p.m., and February 28 at 7 p.m. It is drawn for 43 degrees latitude but may be applied throughout the continental United States.

FEBRUARY MORNING SKY

Venus, Jupiter, and Saturn are all easily visible in the southeast. Watch them change places as they move at their various speeds. Look for the stars of Scorpius and Sagittarius nearby.
